I run a cash-on-delivery sales floor, and I built the software it runs on.

TL & Sales Operations Manager at Proshanti Shop. I own the targets, the courier numbers and two shifts across a 15-hour day. When the tools got in the way, I built better ones, and my CRM is now live in daily use.

PROshanti CRM: one system for the whole order

Orders and fraud	Scores every order on 14 signals and holds the risky ones before a courier fee is spent.
Couriers	Steadfast, Pathao and Paperfly in one place, so carriers can be compared without three dashboards.
Call center	Agents call from the browser through our own Asterisk phone system, with every call tied to the customer.
Cash and ad spend	COD reconciliation checks what couriers pay us against what our records say they owe.
Customers	WhatsApp and Messenger share one inbox, and a retention team calls past buyers from the same system.
Team performance	KPIs score orders weeks after confirmation, so an order that comes back doesn't count as a win.
Control and recovery	Sales staff see masked addresses, the owner's login can view but not change, and a bad release can be rolled back.

`NestJS · Next.js · PostgreSQL · Redis · Asterisk · 103 screens · 66 API controllers · 168 database migrations · 264 test files · 900+ commits`

Where I've worked

`Mar 2026 – Present`

TL & Sales Operations Manager
Proshanti Shop, Dhaka

- Own sales targets, conversion rates and daily output across two shifts and a 15-hour operating day
- Built and rolled out the in-house CRM that now handles orders, couriers, calls and team performance
- Moved the call center to a browser softphone on our own phone system, with call logs and recordings
- Run courier performance reporting across Steadfast, Pathao and Paperfly
- Automated multi-file reporting with Power Query, replacing manual consolidation with a single refresh
- Trained the team on the CRM and documented task ownership, so daily output doesn't depend on direct supervision
- Set up role-based CRM access, so sales staff see masked customer addresses instead of the full record

`Feb 2024 – Dec 2025`

Junior Coordinator, Operations
BYSL Global Technology Group

- Managed competing operational priorities against commercial deadlines
- Built cross-functional practices that improved task accuracy and workflow consistency

`Dec 2022 – Mar 2024`

IT Operations
Oikko, IT Wings

- Introduced proactive monitoring and alert workflows, cutting operational downtime by 15%
- Kept networks stable and data intact under daily production load

`2021 – 2023`

Marketplace Manager
Independent, digital commerce

- Ran three online marketplace shops at once, owning sales, inventory and customer management
- Kept lead-conversion data and customer records accurate across every platform

What I bring

Running operations
Sales targets and conversion
Shift and coverage planning
Courier performance
Team leadership and KPIs

Systems
CRM design and rollout
Role-based access control
Call center telephony
Networking and troubleshooting

Data and selling
Advanced Excel and Sheets
Microsoft Power Query
Inventory systems
Consultative sales and retention
